

# Next Generation 911 Presentation

# FirstNet and ESInet

**FirstNet**

**ESInet**

The background features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern, layered effect on the right side of the slide.

# **WHY?**

## **Legacy Analog Networks**

## Key

Which stage of NG911 implementation are you in?

Red = None at all

- Pink = Stakeholder discussion or

## Planning Consultation

- Yellow = Activity under way for

implementation of NG911.

- Cyan = 911 calls being delivered by

ESInet for at least some carriers on

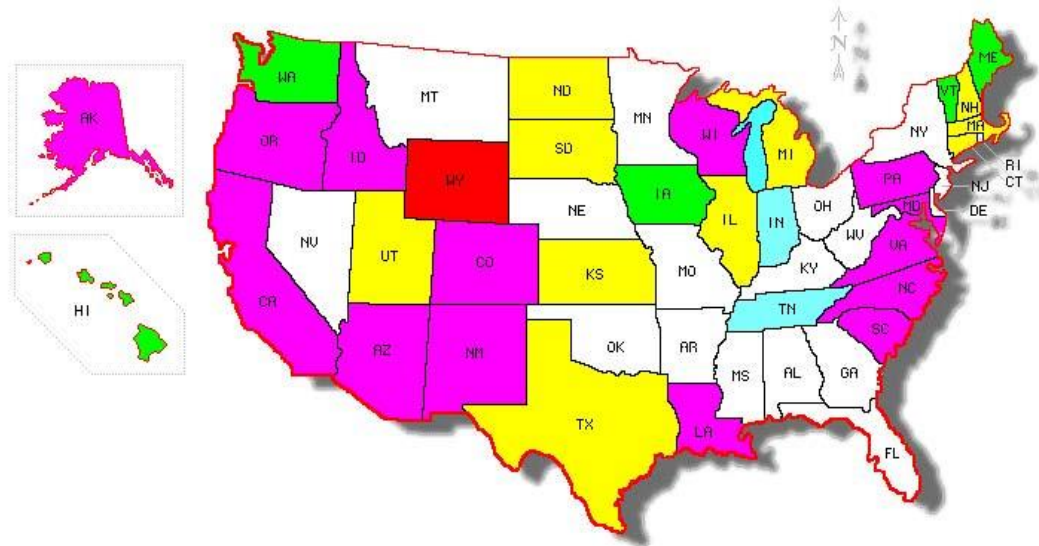

statewide level.

- Green = Full NG911 implemented at

statewide level (all 911 calls  
being

delivered by ESInet).

- Blank = No response

# What are We Working On?

- ▶ ESInet
- ▶ GIS voice and data routing
- ▶ Hosted Services
- ▶ Network Operations Center and Help Desk
- ▶ CAD Interoperability
- ▶ Radio Interoperability

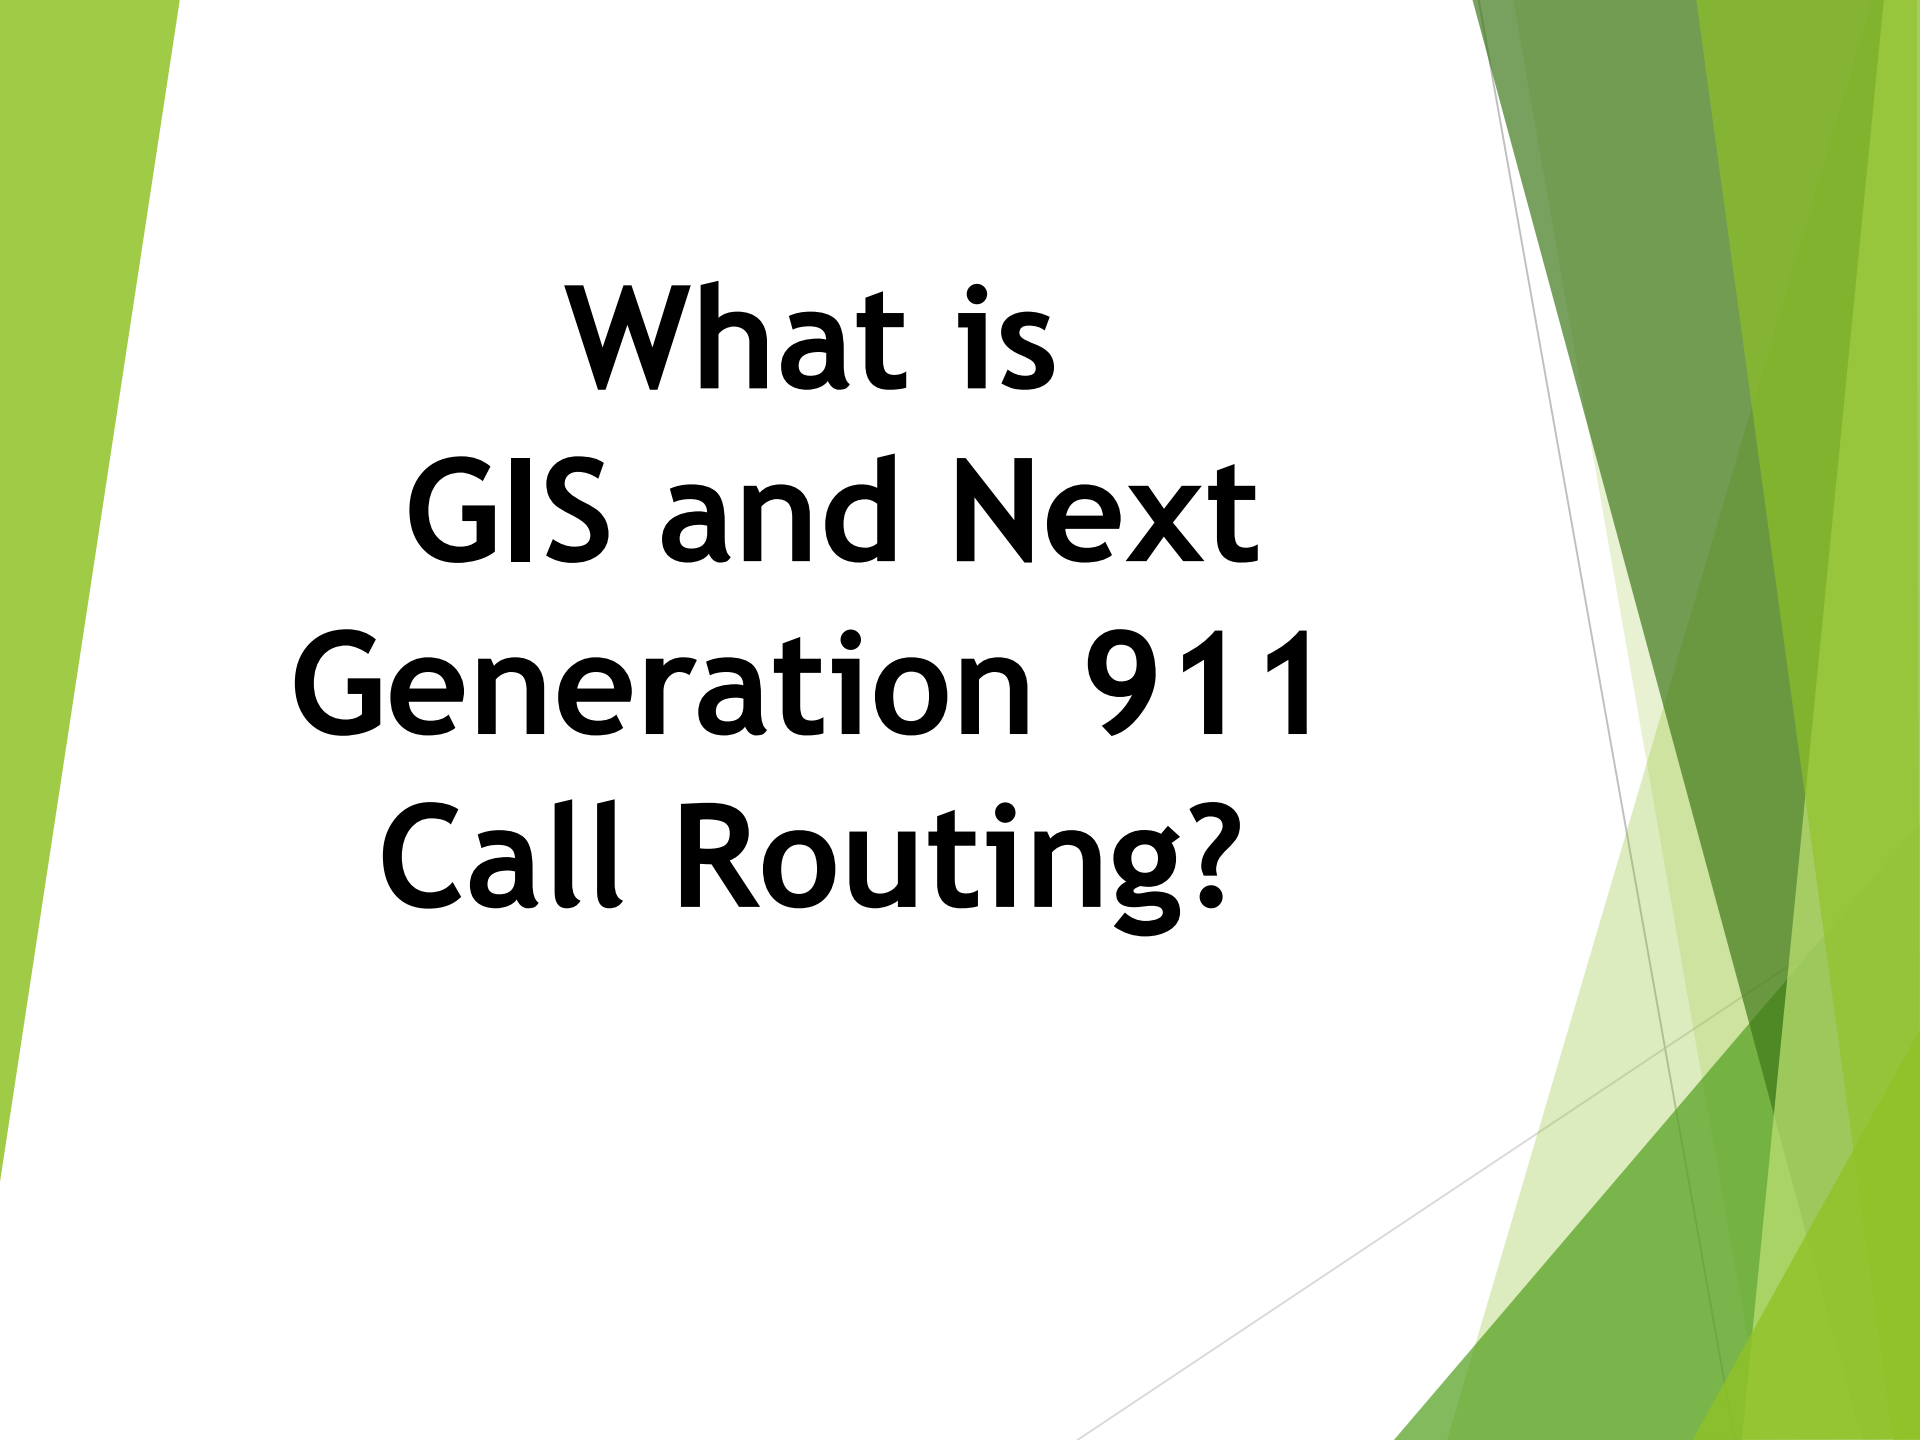

# WHAT is ESInet?

- ▶ **ESInet** is an Emergency Service IP Network. ESInet is not next generation.
- ▶ **Next Generation 9-1-1** is an initiative aimed at updating the infrastructure to improve public emergency communications services in a growingly wireless mobile society. In addition to calling 9-1-1 from a phone, it will enable the public to transmit text, images, video and data to the 9-1-1 center. This NG9-1-1 will replace the current services infrastructure.
- ▶ NG9-1-1 relies on 9-1-1 specific application functionality on an **Emergency Services IP Network (ESInet)** to deliver voice, video, text and data "calls" to the PSAP.

## Tennessee - The Volunteer State

Basic NetTN Network Diagram. Nashville and Knoxville nodes are routing centers and aggregation points. Memphis and Chattanooga are aggregation points only. Tri-Cities is a remote node.

The background features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern, layered effect on the right side of the slide.

# **What is GIS and Next Generation 911 Call Routing?**

## GIS will become the 'hero' of 911, says APCO panelist

-- Urgent Communications, 9/2/2014

“As we shift focus to the future, GIS will become the hero in the next-generation 911 world and the basis for a lot of what happens. It’s really shifting the role from being a supporting role to being perhaps the heart and soul of call routing and many of the other functions. We’re shifting into this hugely geospatial world.”

-- Sean Petty, Mission Critical Partners

# What are Hosted Services?

Remote 911 services for PSAPs with no technical support capabilities.

# What is Network Operations Center and Help Desk?

Performance Monitoring  
Infrastructure Reliability  
Resolve all Technical Issues

# What is **CAD Interoperability?**

Location information sent with the call to  
any CAD anywhere

# **What is Radio Interoperability?**

Dispatch calls from any PSAP over the network to any radio system.

Any PSAP can backup any PSAP.

# Status Update

- 1. Formed a Project Team**
- 2. Studied Tennessee**
- 3. RFI Request for Information**
- 4. RFP for Technical Support Contractor**

# How will these 6 Solutions be Implemented?

Deliberately, Testing.

One PSAP at time.

Regional Networks.

Wireless first.

Not lose a single call.

Where?

When?

# Next Generation 911 Presentation

## Thank You
